SUMMARY

Entry-level cybersecurity candidate with hands-on SOC training and security assessment experience. Completed TryHackMe SOC Level 1 and built Evidentia, a security investigation platform focused on telemetry analysis, event correlation, forensic timelines, and MITRE ATT&CK.

TECHNICAL SKILLS

SOC & Security: Security Monitoring, Alert Triage, Log Analysis, Incident Investigation, SIEM Concepts, MITRE ATT&CK, IOC/IOA, Phishing Analysis, Digital Forensics Fundamentals

Networking: TCP/IP, DNS, HTTP/HTTPS, ARP, NAT, Firewalls, Network Traffic Analysis

Security Tools: splunk, Wireshark, Nmap, Burp Suite, Kali Linux, Metasploit (Lab)

Systems & Automation: Linux, Windows, Python, SQL, Git, GitHub

Security Assessment: OWASP Top 10, Vulnerability Assessment, Zero Trust, Security Logging, Evidence Integrity

SECURITY PROJECTS

Evidentia – Security Investigation & Evidence Intelligence Platform | Personal Project 2026

- Built a security investigation platform that ingests Wazuh/syslog telemetry, applies SHA-256 fingerprinting, and normalizes raw evidence into canonical security events.
- Engineered deterministic event correlation based on entity and temporal proximity to connect related activity into investigation evidence graphs.
- Implemented SHA-256 re-verification and forensic evidence tracking to preserve evidence integrity from ingestion through investigation.
- Designed forensic timelines using occurred and detected timestamps to reconstruct attack sequences and identify telemetry delays.
- Mapped correlated activity to MITRE ATT&CK and generated factor-based risk scores to support analyst-led triage.

ZTAI-Block – AI-Powered Zero Trust Access Control | Personal Project 2025–Present

- Designed an AI-driven anomaly detection layer for Zero Trust access control, analyzing behavioral access signals to identify abnormal activity.
- Applied feature engineering and model evaluation to tune detection performance across simulated normal and attack access patterns.
- Implemented tamper-resistant blockchain-based logging to protect security audit trails against post-incident manipulation.
- Evaluated enterprise-scale security risks and attack surfaces to inform detection logic and system architecture.

CERTIFICATIONS

TryHackMe – SOC Level 1 Learning Path Completed September 2026 | 65h 29m

SIEM Concepts, MITRE ATT&CK, Endpoint Monitoring, Phishing Analysis, Network Traffic Analysis

TryHackMe: Pre Security, Cyber Security 101, Advent of Cyber

Cisco Networking Academy: Introduction to Cybersecurity

EC-Council CEH v13: In Progress | Expected 2026

EDUCATION

Bachelor of Science (B.Sc.) in Information Technology | Guru Nanak Khalsa College, Mumbai 2023–2026

CGPA: 7.5
